

1123 One2One

Simple radio panic button

1123 simple one to one radio staff panic button

This radio product is ideal where there is a single room in a building where staff will be alone with a client and need the reassurance of a means of calling for assistance when they feel threatened.

The kit consists of a battery powered radio panic button (1150) and a mains powered over door lamp and buzzer. The 1123 has a radio receiver that can be "paired" with up to five different panic buttons. There are four different types of panic button available, the covert under desk push button, wall mounted push button, belt clipped portable panic button and the pendant with a lanyard.

Larger systems

Two or three One2One kits can be installed in the same building, and they will all work independently. Using more than three kits would be impractical, it would be cost efficient to fit a multi button master receiver. These are available in various formats, so please call for a free quotation.

Applications

Interview rooms
Consulting rooms
Dental suites
Reception desks
Examination booths
Ultra-scan rooms
X-ray suites
PACE rooms
